Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

On Nov 9, 2002 this sequence version replaced gi:23096537.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas and whole genome contigs are confered, and separated in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence only contigs will be indicated in the feature table.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ------ Genome Center

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can also be used in a kit for the immunodetection of Saureus in a sample. Staureus in fection. The polypeptides can also be used in a kit for the immunodetection of Saureus in a sample. Staureus in a sample, stareus in a sample starensist in the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can be used for their fragments) are useful as primers or probes for isolating computer readable medium.
                                                                                                                                                                            rolynucleotide(s) and proteins derived from stored on computer readable medium and used anti-S.aureus vaccines
                                                                                                                                                                                                                                                                   Claim 1; Page 1984-1985; 3271pp; English

epidermidis; open reading frame; ORF; bacterial infection; ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP3124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis lifection. When The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site. Novel isolated nucleic acid encoding a Staphylococcus epidermidis polypeptide, useful for diagnosing and treating bacterial infections Staphylococcus epidermidis ORF nucleic acid sequence SEQ ID NO:2156 Sequence 387 BP; 175 A; 39 C; 55 G; 118 T; 0 other; Disclosure; SEQ ID 2156; 267pp; English. gene; ds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated cypG dinucleotides within the target nucleic acid. AB203861 to AB21118 crepresent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: for invention oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute invention to the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the multication of haematopoietic cell proliferation disorder related by sequences. The nucleotide sequences from the present invention can subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative and informed treatment of patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting and differentiating between hematopoietic cell proliferative disorders, comprises contacting a target nucleic acid with a reagent that distinguishes between methylated and non-methylated CpG dinucleotides.
                                                                                                                                                                                                                                        Haematopoietic cell proliferation disorder related DNA sequence #386.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent. Which distinguishes between methylated and non-methylated copy for which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ1118 corpresent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative clasorder haematopoietic cells; for differentiating between acute lymphocytic leukaemia and acute myplogenous leukaemia; as probes for determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related camplification of haematopoietic cell proliferation disorder related by sequences. The nucleotide sequences from the present invention can subclasses, diagnosis, prognosis, treatment and/or mentoring of haematopoietic cell proliferative cell proliferative a highly specific classification of haematopoietic cell proliferative call proliferativ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              149

The present invention describes a method for detecting and differentiating between haematopoletic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated cipd CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ1118 copresent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute lymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related supplication of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subject subjects cell proliferation disorder related becauseds, present method enables a highly specific classification of haematopoietic cell proliferative disorders. The present method canables a highly specific classification of haematopoietic cell proliferative disorders cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  236
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           326

in given. Inventor describes a method for detecting and associated with at least 1 gene and/or their regulatory regions in a seociated with at least 1 gene and/or their regulatory regions in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZO9861 to ABZ1118 represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative discorder haematopoietic cells; for differentiating between acute lymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferation of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1434
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1374

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelial infections, food poisoning, osteomyelitis, shin and surgical wound infections, scaled skin syndrome, otc. Organisms transformed with the DNA sequences can be used for the transment production of the polypeptides. The new DNA sequences can be used and their fragments) are useful as primers or probes for isolating the new companion and the S.aureus DNA sequences contained on the

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences an also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life Cycle or Inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site

AAA65809 to AAA65889 and AAA66058 to AAA66138 represent nucleotide agequences derived from Escherichia coli which inhibit E. coli prollieration. AAA65890 to AAA66055 and AAB15886 to AAB16040 represent nucleotide and protein sequences associated with E. coli prollieration. AAA66057 represent primers used for sequencing E. coli prollieration inhibiting nucleotide inserts in an example from the present invention. Methods from the present invention can be used to latentify a prollieration-required gene in a microorganism, by contacting a microorganism with a prollieration-required gene activity inhibitory nucleic acid identified in another organism, and determining if inhibition occurs in the second microorganism. The nucleic acid sequences identified as being required for bacterial growth and prollieration, can be used for antisense therapy for killing bacteria. 120 Promoter; expression cassette; structural gene; plant; transgenic; linseed; fatty acid ester; polyunsaturated fatty acid; PUFA; cosmetic; animal nutrition; human nutrition; pharmaceutical; cholesterol; blood; ATATCAATAAGTTGGAGTCATTACCGAATTTTTATACTTATTTGTTTAGAATGAACTTTA 1 GTTTTCAAAATCGGTGGAGGTGCATGAAAAGTTATTGGGCATTTTTTGAAAATAAAAA 377 Gricicaaaarceereeaegecrecareacaaercarceeeeerrarcreaacaraaaaca 317 CTATCAATAAGTTGGAGTCATTACCGACATTAAAAGTAACTTTTTTGAAATTAGAGATAA Novel polynucleotides and polypeptides associated with microorganism proliferation, used to identify inhibitors of bacterial growth and proliferation, for use in antisense therapy -Gaps . This invention describes novel expression cassette (EC) containing at least one each of plant promoter (P) and structural gene (SG) expressed in plants, flanked by specific restriction enzyme (RE) recognition sites. The EC has the structure (LI-P-SG-L2) in where L1 = is a polylinker sequences reproduced (ABG/7612) in where L1 = is a polylinker sequences reproduced (ABG/789-ABG/7801) or equivalent RE-site-containing sequences and n = 1-3. The invention discloses a vector containing this EC, an organism containing the EC or the vector and a transgenic plant containing a mon-libration incleic acid in the vector. Transgenic plant esters with an increased content of polyunsaturated fatty acids (PUFA); useful in animal and human nutrition, cosmetics and pharmaceuticals, e.g. provide increased and more nutrition, cosmetics and pharmaceuticals, e.g. provide increased and more produce increased and more produce increased and more and more negligible production of fine chemicals, e.g. provide increased and more negligible production of fine chemicals of the invention feared in production of fine chemicals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0

The invention relates to preparing (M1) fatty acid esters (I) with anomoreased content of polyunsaturated fatty acids (II) with at least two double bonds by introducing into a (I) -producing organism a specific nucleic acid (A) (M1) is useful for preparing ester containing to polyunsaturated fatty acids. Oils, lipids and (II) or their fractions, produced by (M1) are used in animal and human nutrition, cosmetics and pharmaceuticals, e.g. (II) are known to reduce levels of cholesterol in the blood and to protect against heart disease. Calls that express (A) are also used to identify (ant)agonists of desaturases, e.g. for modularing the yield and rate of production of particular fine chemicals in microorganisms (claimed). Also (A) and derived proteins can be used as markers of specific genomic regions and in evolutionary/protein structural studies. (M1) is suitable for large scale production (no known bioengineering method can produce (II) on a useful scale). The present promoter and terminator surrounding the site for insertion of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3749 Gircicaaairdegiedagciedaidacaaadicairdegcairaicidaacaiaaaca 3690

This invention describes novel expression cassette (EC) containing at least one each of plant promoter (P) and structural gene (SQ) expressed in plants, flanked by specific restriction enzyme (RE) recognition sites. The EC has the structure (LI-P-SG-L2) in where il = is a polylinker (ABQ76798), L2 = any of three synthetic polylinker-terminator-polylinker sequences and n = 1-3. The invention discloses a vector containing sequences and n = 1-3. The invention discloses a vector containing this EC, an organism containing the EC or the vector and a transgenic plant containing a (non-)functional nucleic acid in the vector. Transgenic plants e.g. linseed can be prepared with improved production of fatty acid setul in animal and human nutrition, cosmetics and pharmaceuticals, e.g. UVFA are known to reduce levels of cholesterol in the blood and to provide increased and more efficient production of fine chemicals (especially PUFA), including seed specific production. This sequence increasents a nucleic acid sequence used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        invention

The invention relates to preparing (M1) fatty acid esters (I) with an increased content of polyunsaturated fatty acids (II) with at least two

double bonds by introducing into a (I)-producing organism a specific nucleic acid (A). (M1) is useful for preparing ester containing polyumsaturated fatty acids. Oils, lipids and (II) or their fractions, produced by (M1) are used in animal and human nutrition, cosmetics and pharmaceuticals, e.g. (II) are known to reduce levels of cholesterol in the blood and to protect against heart disease. (Cells that express (A) are also used to identify (ant) agoinst heart disease. (Cells that express (A) modulating the yield and rate of production of particular fine chemicals in microorganisms (claimed). Also (A) and derived proteins can be used as markers of specific genomic regions and in evolutionary/protein structural studies. (M1) is suitable for large scale production (no known bioengineering method can produce (II) on a useful scale). The present sequence is that of a pucil abased expression vector with a plant specific promoter and terminator surrounding the site for insertion of an expression cassette

sequences and n = 1-3. The invention discloses a vector containing sequences and n = 1-1. The invention discloses a vector containing this BC, an organism containing the BC or the vector and a transgenic plant containing a fond. Further the vector transgenic plants e.g. linseed can be prepared with improved production of fatty acid esters with an increased content of polyunsaturated fatty acids (BUFA). Buff are known to reduce levels of cholesterol in the blood and to protect against heart disease. The expression casettes of the invention provide increased and more efficient production of fine chemicals e.g. (especially PUFA), including seed-specific production. This sequence represents a nucleic acid sequence used to illustrate the method of the
sequences reproduced (ABQ76799-ABQ76801) or equivalent RB-site-containing sequences and n = 1-3. The invention discloses a vector containing this
                                                                                                                                                                                                                                                                                                                                                                                             invention.
